

Fall Monitoring Without Disturbing Alarm Noise

With Smart Caregiver's New *Melody*™ Fall Monitoring.

Smart Caregiver addresses one of the biggest issues facing elderly care facilities today; disturbing alarm noise.

Caregivers rely on medical technology to let them know about important changes that occur with those under their care, yet paradoxically, the proliferation of medical device alarms can have a negative effect on good caregiving practices. Research shows that alarms, especially multiple alarms in a given space, can quickly overwhelm caregivers, sometimes resulting in the devices being turned off or silenced, defeating their purpose. From a patient's perspective, alarm noise ranges from annoying at best to severely startling.

Smart Caregiver solves the noisy alarm problem with music. For 2011, Smart fall monitors ship with a pre-recorded musical alert that caregivers may choose as an alternative to alarm noise. In addition, the *Melody Monitor with Recordable Voice* model even allows staff to easily create customized music or voice recordings. Residents and caregivers are happier with one less alarm and more peaceful facilities.

Comes with Musical Alert

Caregivers may choose a musical alert rather than an alarm sound

Recordable Voice or Music

Customize the music or create a familiar voice recording

Adjustable Volume

Alerts may be quiet or any desired volume

Works with:

Chair Sensor Pads

Pressure-Sensing Floor Mats

Early Warning Chair Belts

Bed Sensor Pads
